### Program Overview

The goal of MCPAP is to improve access to treatment for children with behavioral health needs and their families by making child psychiatry services accessible to primary care providers across Massachusetts.

MCPAP provides quick access to psychiatric consultation and facilitates referrals for accessing ongoing behavioral health care. We encourage and supports PCPs integrating behavioral health resources into their practices and work with behavioral health providers as well as primary care providers. MCPAP is available for all children and families, through their primary care providers, regardless of insurance. MCPAP is free to all PCPs. If you are not yet enrolled in MCPAP we encourage you to contact one of our teams or click the Enroll button on this website.

**Clinical Conversations:** Join us on the 4th Tuesday of each month from 12:15-1:15 p.m. for a conversation with a MCPAP Psychiatrist or subject matter expert on a variety of behavioral health topics, click [here](#) for recordings of recent webinars.

### New at MCPAP!

New ASAP-MCPAP Service

Virtual Substance Use Counseling for Pediatric Primary Care Patients

#### New Substance Use Counseling Service!

The ASAP-MCPAP (Adolescent Substance Use and Addiction Program at Boston Children's Hospital) partnership is expanding beyond SUD consultation services to offer virtual substance use counseling for pediatric primary care practices. To learn more about all ASAP-MCPAP services, click [here](#).
